

Cyber Attack and Scam Awareness Training

Cybercrime is on a rise and poses a growing risk to every organisation. We use the internet every day without realizing it. Cybercrime is becoming more common. There are many ways personal data can be leaked. Customer accounts can be compromised. Financial problems can also be created that could directly impact your organization.

Cyber-attack and scam awareness is a course that will help you and your employees protect themselves from cyber criminals. This one-day training course will teach you how hackers and bots can gain access to your system, and how to protect your personal information from online fraud.

Businesses of all sizes need to be aware of cyber security and how it can impact their daily operations. This course is designed to help you and your employees protect themselves from cyber criminals. You and your staff can help to protect your company and data from cyber criminals by completing this training.. Protect yourself against everyday dangers and potential harm.

Course Overview

You will spend the first part of the session getting to know participants and discussing what will take place during the workshop. Students will also have an opportunity to identify their personal learning objectives.

This workshop will help you teach participants to:

- Understand your responsibilities and the risks with regards to cybercrime.
- Recognize the potential risks of cyber activity.
- Defend your network against malware attacks using anti-malware defenses.
- Learn about the data access levels and restrictions.
- Identify additional security measures that are required to work remotely or at home.
- Describe the security risks and how to protect them.
- Identify weak points in your network or devices and take the necessary steps to fix them.

Targeted Email Phishing & Social Engineering

First we will discover how targeted email phishing is carried out against you and recognise the main red flags that can be used to help you detect these emails in future.

Email Compromise for Business

Here, participants will be able to see how scammers manipulate us into initiating data transfer, the red flags, and how we can stop them from doing so!

Phishing Attacks with Cyber security Awareness

In this session, participants will learn different tips on how they can avoid phishing attacks.

Instant Messaging

In this session, we will show participants how people can hack their computer using the same techniques as in phishing emails.

Smishing

This session will help participants to identify fraudulent SMS messages and what to do.

Red Flags

In this session participants will be able to identify main emotions that social engineers try to invoke in you, to make you do what they want. We will show you how to recognise and respond to phishing attacks against your computer.

Human firewall is the last line of defense

Scammers and cyber criminals are targeting all businesses, large and small. In this session, we will be discussing the importance of cyber security defense strategies for businesses.

Workshop Wrap-Up

At the end of the day, students will have an opportunity to ask questions and fill out an action plan.
